

EATCA China RoHS services

欧亚贸易顾问公司中国电子信息产品污染控制管理办法服务

Europe-Asia Trading Consultant Agency Ltd.
EATCA

your success, our passion

Our RoHS services

- The primary purpose is to provide companies with a detailed and clear path forward.
- Environmental compliance should not have to be a company's primary focus, so it can really focus on it's core business.
- China RoHS has changes regularly, we keep track of them.
- We help your company to gather and update all the relevant documents and regulations in order to stay in line with the latest requirements.
- From the start till end, we offer consulting- and project management services and help to get your products compliant to the RoHS, including meetings and support with certification companies.

China RoHS

two-step approach

- First step – **in force date: 1 March 2007**
 - Manufacturers are required to explicit indicate the use of toxic and hazardous substances, environment-friendly usage, recycle ability etc...
 - On electronic information products (EIPs)
 - On packaging materials
- Second step: – **in force date: tbd.**
 - When EIPs are listed in the catalogue:
 - either a substitution has to replace the toxic and hazardous substances
 - or have to meet the limits set by the standards and get the 3C certification before entering the Chinese market

step solution to China RoHS

- Data gathering and updating
- Investigate the RoHS requirements for your products
- Explanations on the China RoHS official documents in Chinese and in English
 - Know how to understand the documents in the right way
 - Definitions: EIPs, the catalogue, restricted substances, etc...
 - Implementation and comply tactics
 - Comparison between China RoHS and EU RoHS
- Advise and support on substance restrictions in China RoHS
 - Scope of the substance restrictions
 - Scope of the adoptable EIPs
 - The requirements of the substance restrictions in the classification of materials in EIPs
- Third party RoHS analyze and certification project management
- Product labeling and marking
 - Labels or manual information requirements
 - Hazardous substance marking
 - Recover ability marking
 - Packaging material composition marking
- Company documentation management
- Next step compliance preparations
